Initial UI Design

Basic Functionalities

Under the hood implementation

User Login

On Initial Launch - *User Login*

On Launch afterwards - *Main Button*

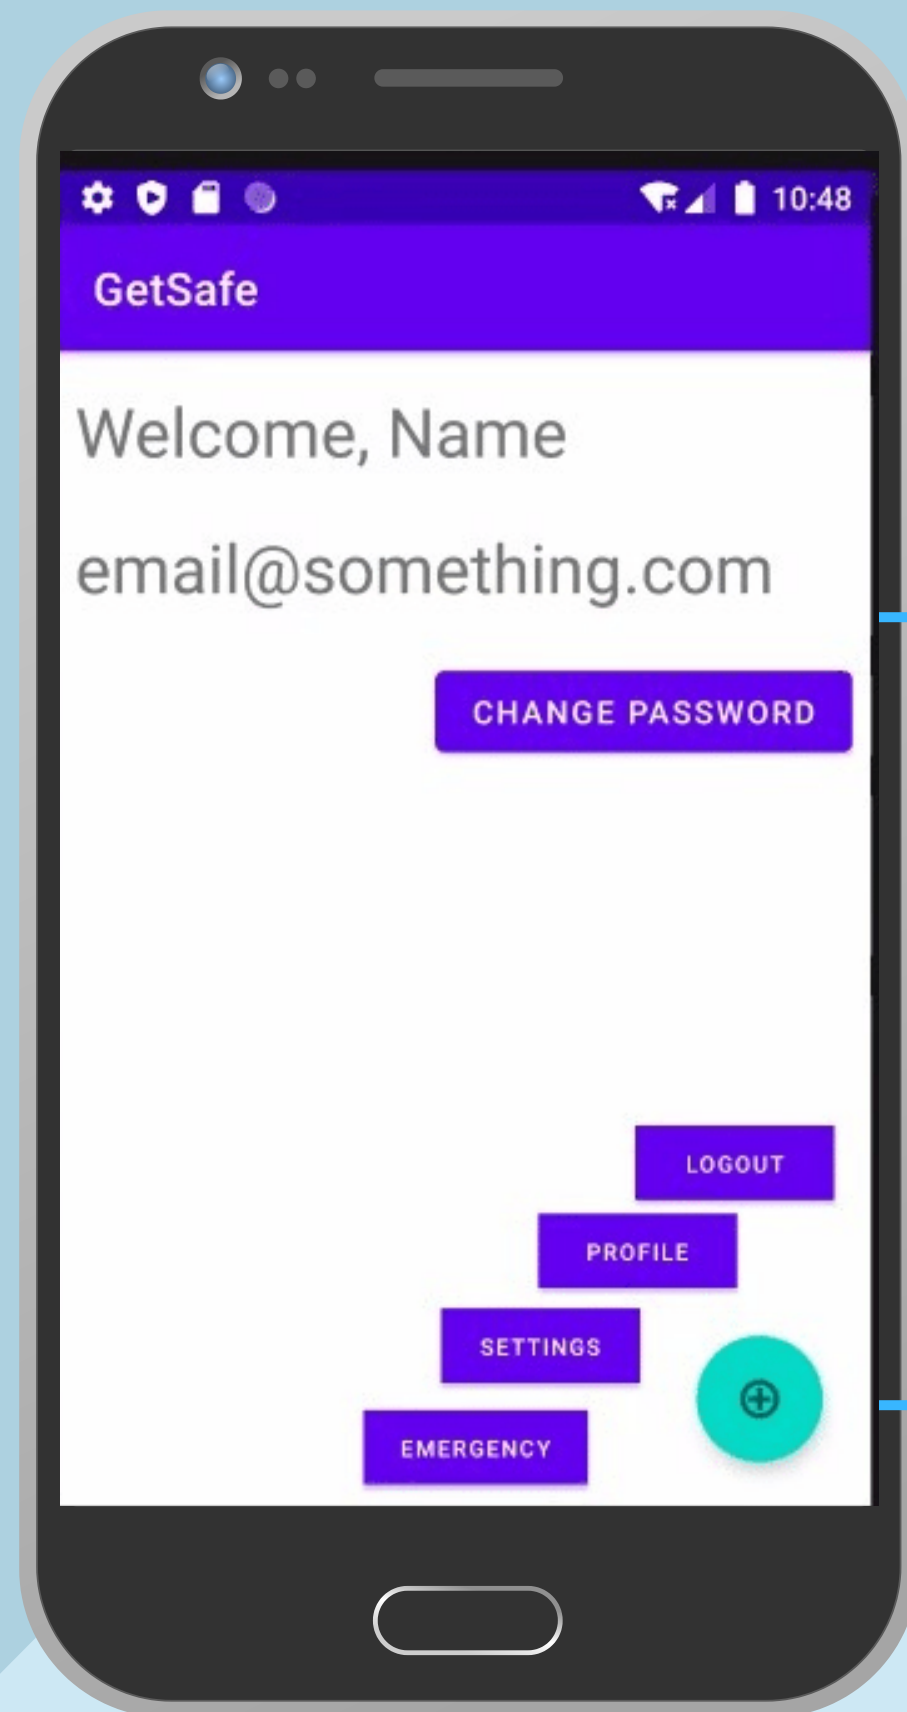

1

User can enter their credentials to Login

2

Login or Signing up to a new account

User Information Page

User Info

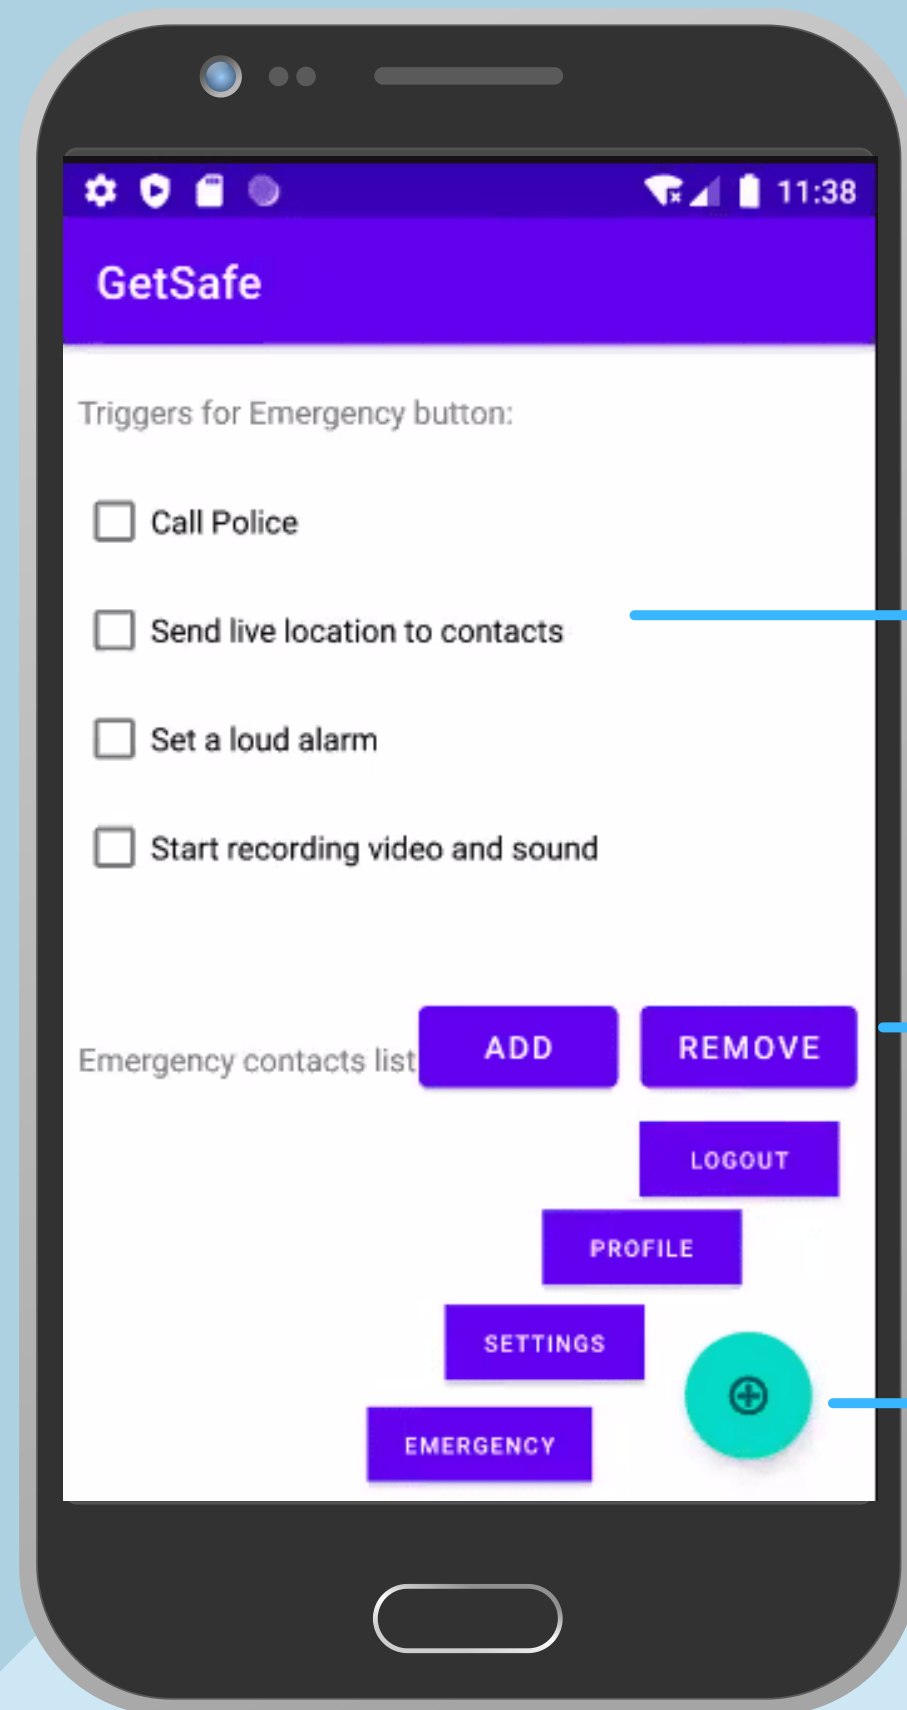

1

User can change their information, such as username, password and email

2

Navigation between pages

User Settings Page

Settings

1

User can set up the desired actions to be executed by the application in case of emergency

2

User can edit their list of emergency contacts

3

Navigation between pages

Emergency Main Button

Main Button

1

User can trigger the emergency button on release

2

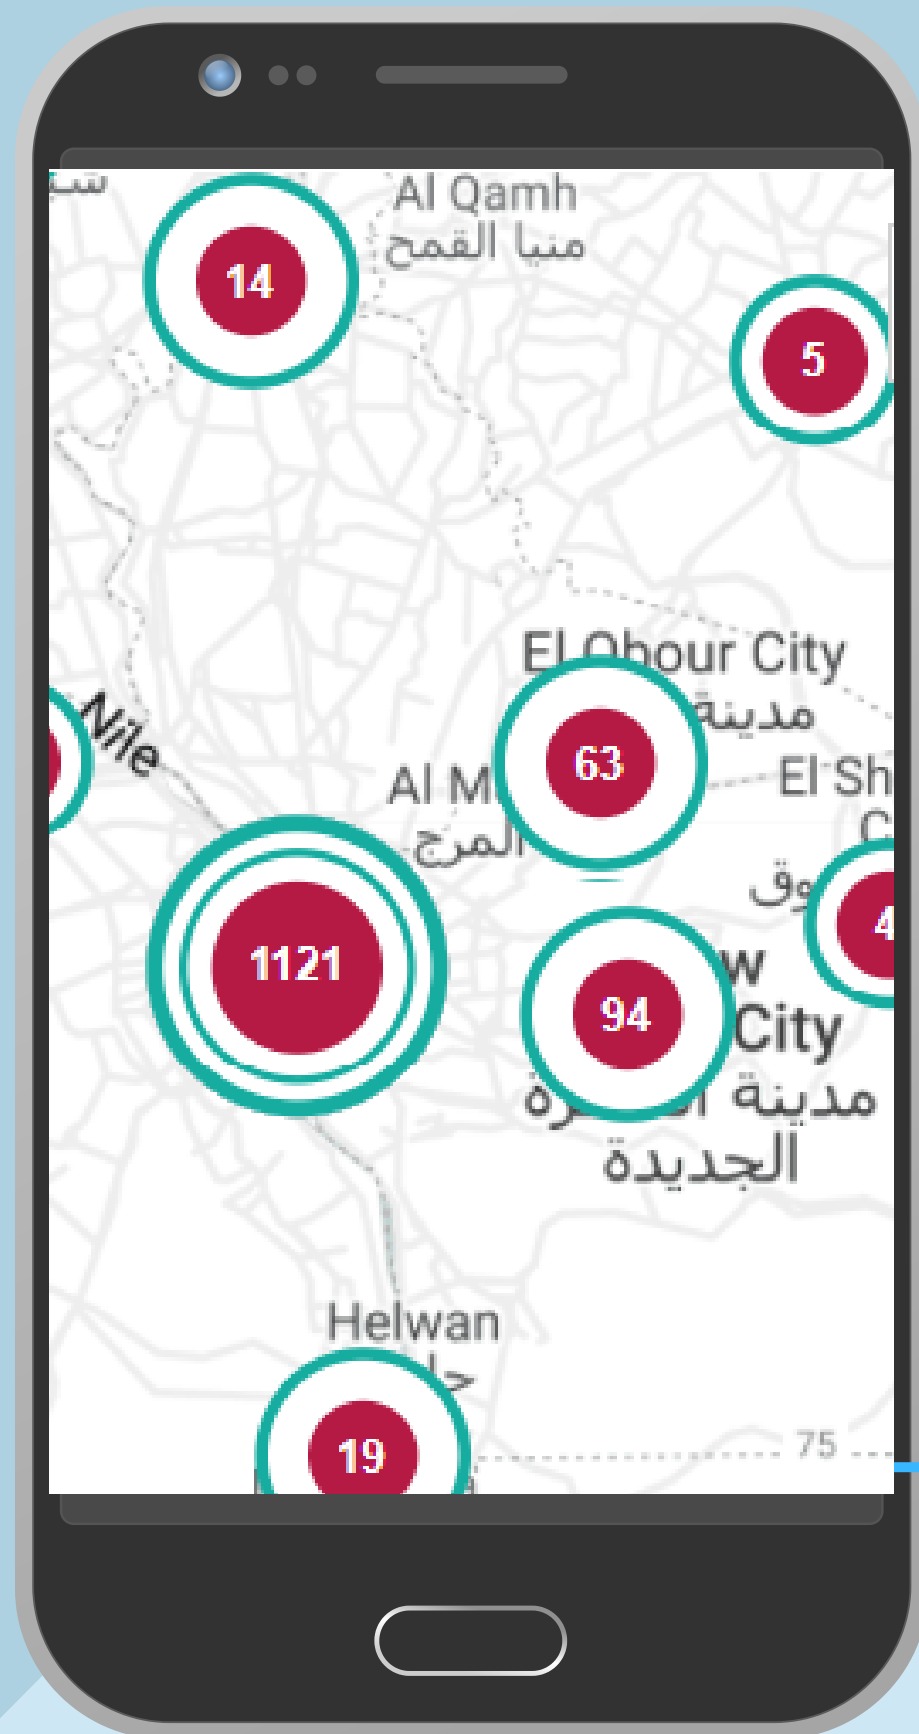

User can cancel the emergency request on button swipe up

3

Navigation between pages

HarassMap Service

Users can view harassment hotspots on the map using HarassMap.org

1

Navigation between pages

HarassMap Under the Hood

The screenshot displays the HarassMap web application. On the left, there's a sidebar with controls for selecting pages, locations (100), and extracting names, along with a 'Get Data' button. The main area shows a table of locations with columns for name, address, and date. Below the table is a pagination bar showing 185 items. At the bottom, there's a section for exporting data to CSV/Excel or JSON, with a 'Show more data' link and a 'Visuals enabled (advanced)' toggle.

الاسم	العنوان	التاريخ
مدينتي القاهرة	مدينتي القاهرة	2020 / 10 / 07
مدينتي القاهرة	مدينتي القاهرة	2020 / 10 / 03
مدينتي القاهرة	مدينتي القاهرة	2020 / 09 / 28
مدينتي القاهرة	مدينتي القاهرة	2020 / 09 / 21

```
{
  "name": "Cairo",
  "name": "The Wahat Route to Mosary(turn before MSA University), MADAYEK AL ANHAM",
  "name": "مدينتي القاهرة",
  "name": "Anchorage, Alaska",
  "name": "Doxapatri 1, Athens Greece",
  "name": "موقف الجراج بجزر السويس القاهرة",
  "name": "موقف الجراج بجزر السويس القاهرة"
}
```

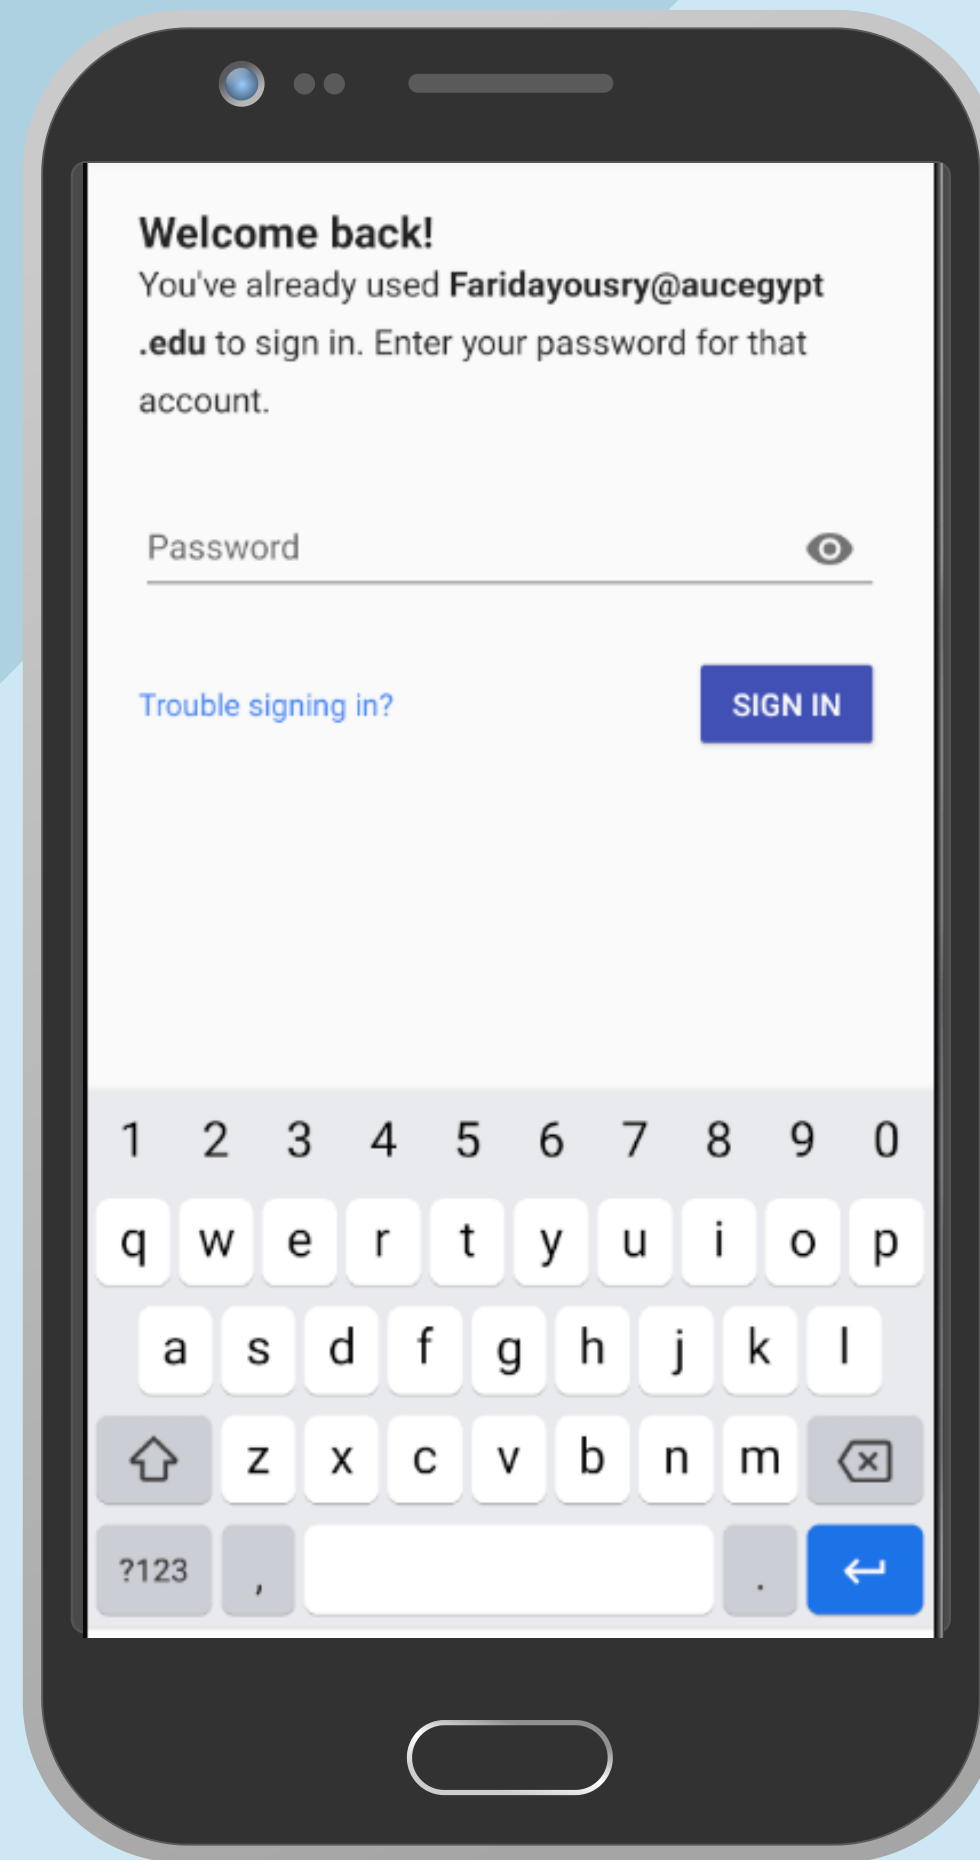

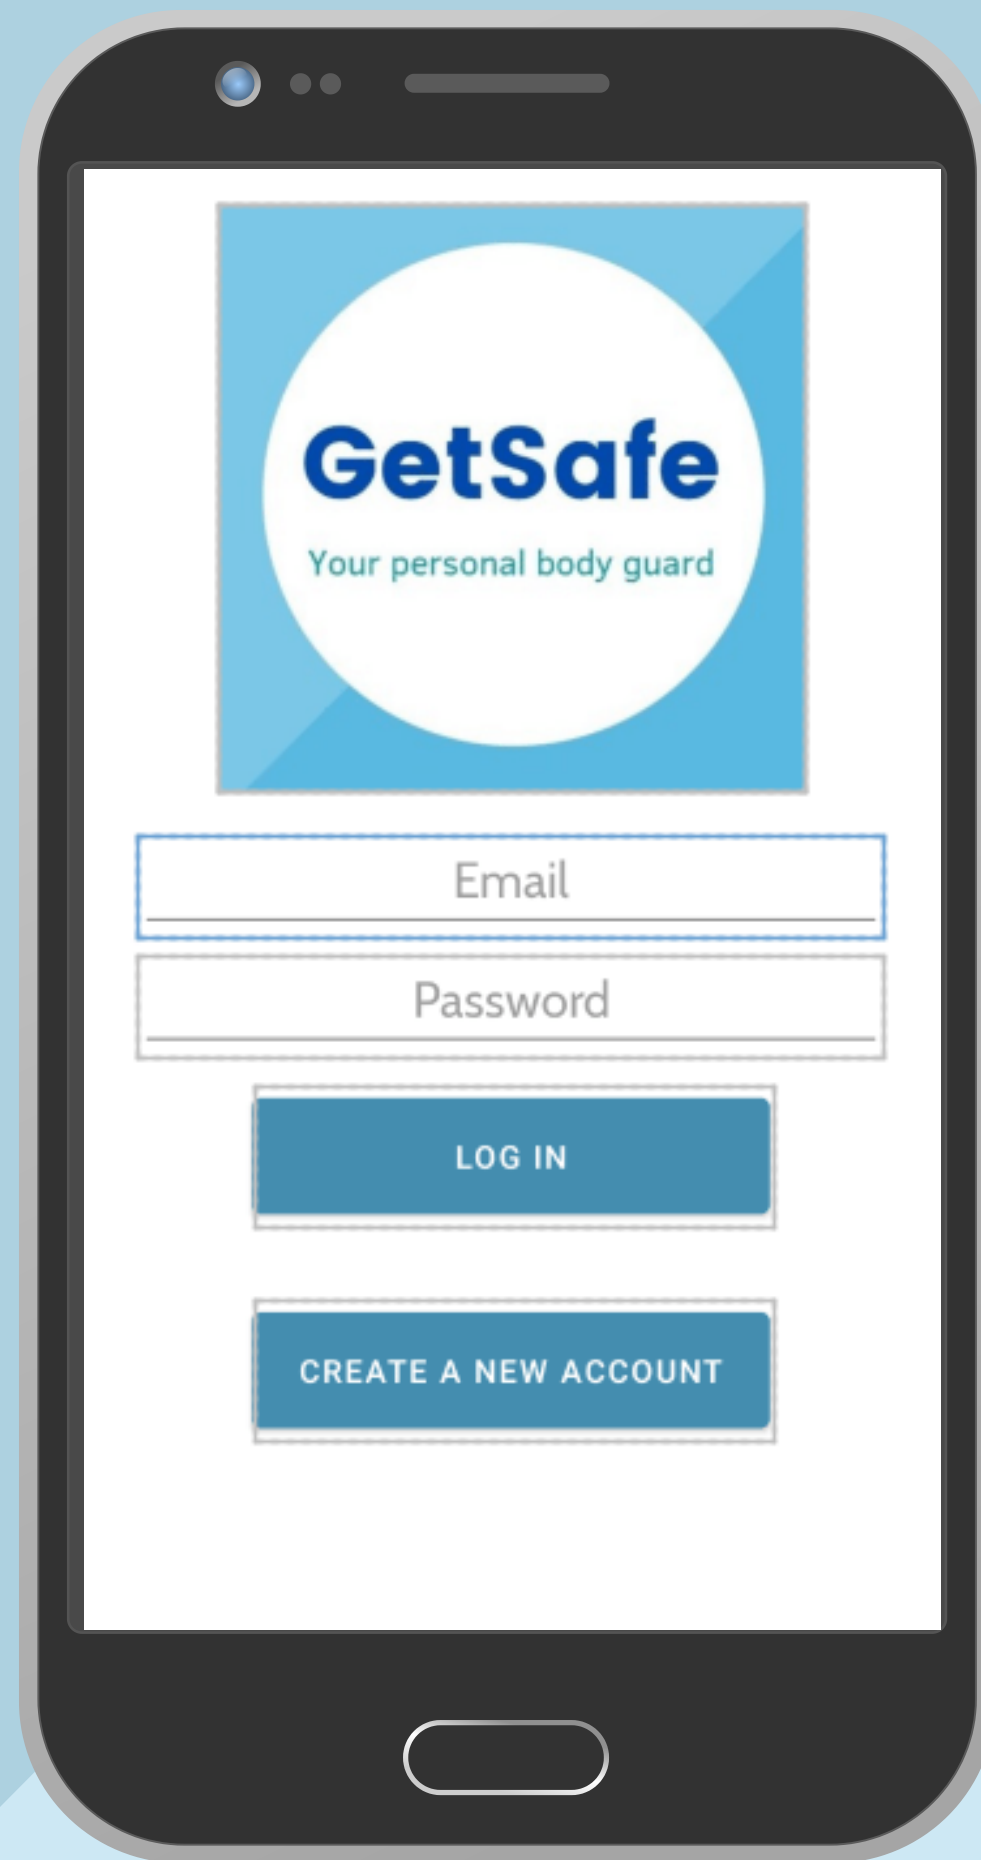

Map Data will be extracted as a JSON object from HarassMap then utilized to send warning notifications when 'walking' into danger zones with frequent cases.

Mile Stone 3

Final UI Design

Mostly Function

Back-end + Firebase

Log In - Updated

On initial launch – the user is directed to the login page.

Every other launch afterwards directs to the main button page for ease of access during emergencies.

Login & sign up page has been implemented using firebase API's

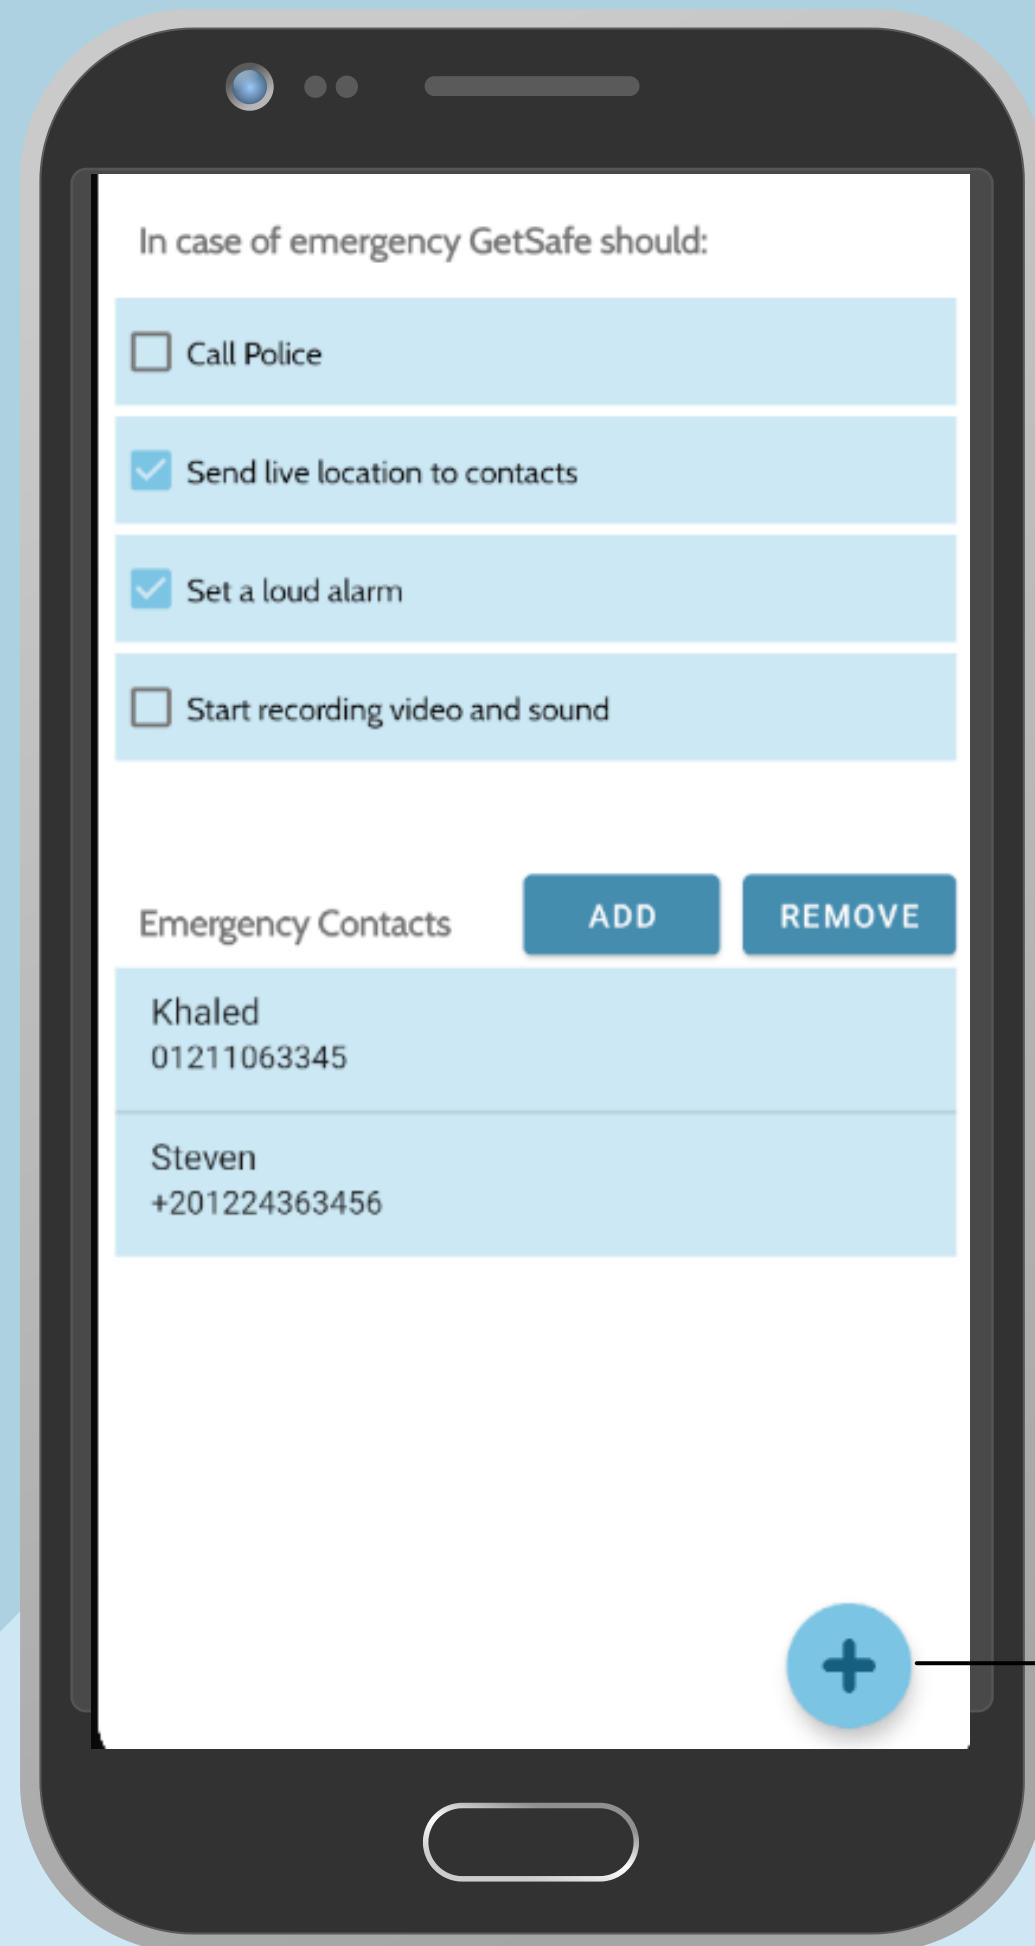

Main Button - Updated

In the case of emergency the user can press on the main button, which if released unintentionally, triggers the procedures priorly specified by the user in the settings.

In the case that the user no longer feels endangered, they can opt to cancel the emergency procedures through swiping up to click on the abort button.

The user can expand the action button to navigate through the application

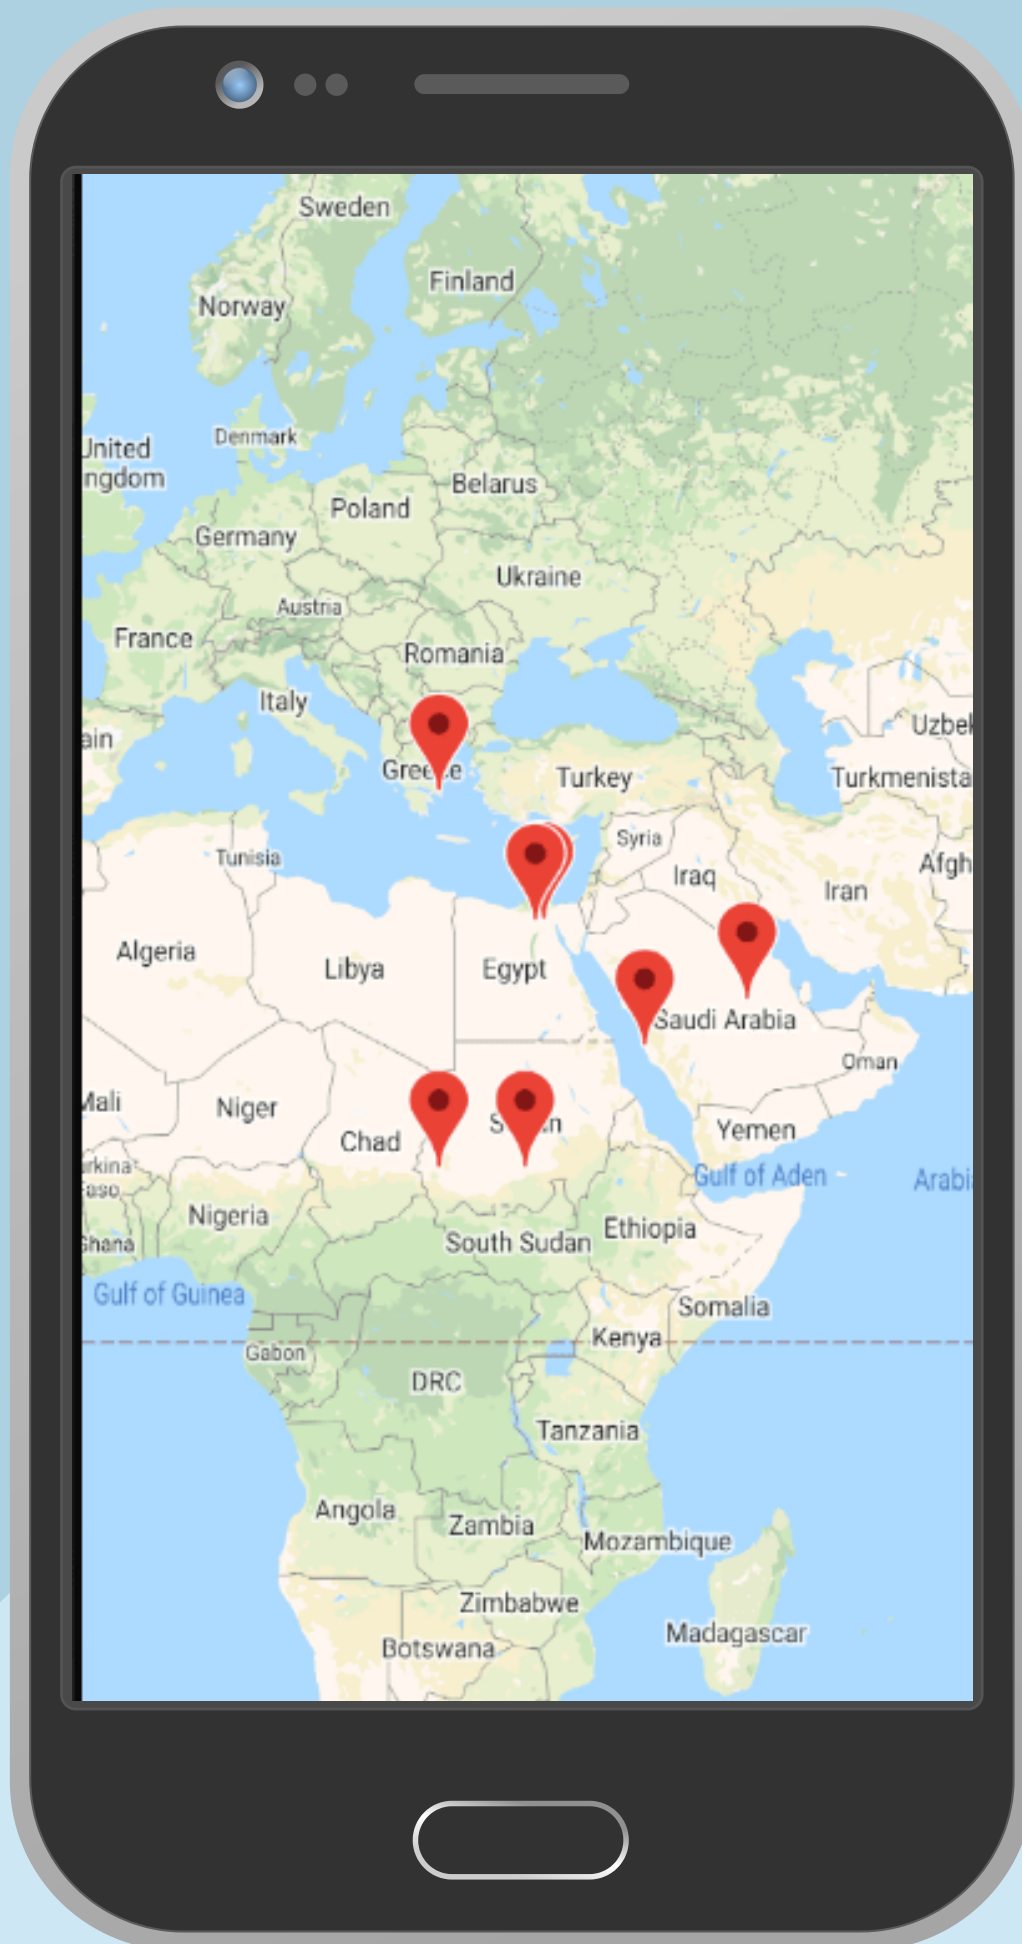

User Settings – Updated

User can customize the procedures they wish to be executed in the case of emergencies.

In addition, they can add and remove contacts to their list of Emergency contacts, who will be sent the user's location during emergencies

The user can expand the action button to navigate through the application

HarassMap Service - Updated

The user can access a map showing harassment hotspots nearby, in addition to being notified when near dangerous areas.

Latitude & Longitude data has been extracted and parsed from the [HarassMap.org](https://www.harassmap.org) website in the form of JSON objects, then embedded as marker points on GetSafe's own map.

Back-end Implementation

- Currently the application utilizes shared preferences to store data about the user such as emergency contacts and preferred emergency procedures.
- Database is set up and API's are running
 - Only the Login & Sign up have a complete back-end
- Implementing them in the application is underway
